

CL100 FlushTurn

The **CaviLock® CL100 Flush Turn** is specifically designed for sliding doors. It incorporates machined brass components that are satin chrome plated.

Because of its shallow fitting depth and positive feel to the turn, this is a popular side handle for both latching and non-latching applications.

When combined with the CL100 Mortise Lock and euro profile cylinder it makes for a great looking medium security option.

Requires minimum door thickness of 1-1/2" (37mm).
